

2083-1610 Block Translator, 1600-2000 to 950-1350 MHz

2083-1610 Block Translator - The 2083-1610 Block Translator converts a 1600-2000 MHz block to 950-1350 MHz block with no spectrum inversion, low group delay and flat frequency response. The 1600-2000 MHz input is mixed with synthesized local oscillator (LO) signals, first to **2800 MHz** center frequency and finally to the **950-1350 MHz** block output. **The maximum input level (MAX IN) can be set for -20 to -40 dBm in 1±1 dB increments.** Multifunction switches select the **MAX IN** and internal or External (**Option E**) 10 MHz reference which appear on the LCD display and can be adjusted remotely. Front panel LEDs provide indication of DC power (green), PLL alarm (red), and remote operation (yellow). Connectors are **BNC female** for RF input and output. The unit is powered by a 100-240 ±10% VAC, 47-63 HZ input power supply and housed in a 1 3/4" X 19" X 16" rack mount chassis.
